

Sofia de la Torre

Detective,

You haven't gotten any threats, have you? I found something pretty disturbing on my locker earlier. A cryptic note about minding my business. I think the killer left it, which means we're on the right track and the killer knows it.

I should've known this investigation would make someone mad. The video we found at Nathan's house is a huge lead, and I think Nathan died because of it, which doesn't really bode well for us. So the quicker we can solve this, the quicker we can get the target off our backs.

We know Marcus was working with someone to take down Nathan in some way now, but how? Why? And who was he working with? It's great that the allegations of cheating against Nathan turned out to be wrong, but proving him innocent has just raised more questions.

I can't just ask Marcus who he was working with. He'll deny it or say something about needing a lawyer present or, if he's the murderer, something much worse. Plus, the video itself only shows half of an incriminating conversation. Until we know the other half, there's too much plausible deniability for it to be incriminating. I've watched the video several times now and still haven't figured out who he was talking to. The only thing that stands out to me is how the light keeps changing throughout the video.

Somebody had to be messing around with the console in the light booth during Marcus's conversation. Maybe they saw something that could help us? The only problem is we don't know what time the video was taken. Without that, I figured it would be nearly impossible to track who was up there.

But then I realized something. When I worked in the booth last summer, I had to clear out the saved light sequences every two weeks. But since no one's been in there since the murder, the light preset that's running in the video is likely still there. So I printed out the log of presets edited from that week, and I'm sending it over to you.

If you check the security portal using Carol's account like before, you can access the console yourself and see a live feed of the ice. You should be able to use it to mess around with the lights in real time and find the sequence preset from the video. All we have to do after that is figure out who was at the rink at the time that preset was programmed, and we've got our potential informant.

As soon as you figure out the time the video was taken, send me the time at threepinescase.com with the new password **FLIP** to keep me up to date on your investigation. After you do that, we can zero in on whoever was inside the booth. Then I'll talk to them and get whatever answers I can.

Talk soon,

Sofia
